01 SUMMARY

AI Product Specialist with 2+ years of professional experience across engineering, QA, and product roles, now Operations Tech Specialist at The Professional Builder (New Zealand), turning manual business processes into AI products and automations that run themselves (n8n + LLM APIs). This is backed by real full-stack engineering: 15 months designing and shipping a production SaaS end-to-end on React, Node.js, and PostgreSQL. Comfortable owning a product end-to-end, from requirements and UX design through engineering, deployment, and the small details that make products feel polished. Recently designed and built a complete project management platform (monorepo, role-based access control, Gantt scheduling, real-time collaboration) deployed to production on Vercel + Railway.

02 WORK EXPERIENCE

The Professional Builder

New Zealand · Remote

Operations Tech Specialist (Tech DevOps)

Sept 2026 – Present

- Own internal tech operations for a New Zealand coaching company's global team, building tools and automations that replace manual, error-prone processes.
- Authored the company AI Acceptable Use Policy and a P1-P5 support ticket SLA, and administer core SaaS across Zoom, Circle, and Vimeo.
- Audit and fix HubSpot CRM workflows and automations to keep the sales and delivery pipeline reliable.
- Build internal data-migration, reporting, and automation scripts against vendor APIs (Zoom, Circle, Vimeo) to streamline operations.

ouvar® (5P Group)

Queensland, Australia · Remote

Product Developer (also Project Manager & Scrum Master)

Feb 2025 – May 2026

- Ran sprint planning, daily standups, and backlog grooming as Scrum Master; owned roadmap, ticket flow, and stakeholder updates in Jira and Confluence as Project Manager.
- Translated business requirements into engineering tasks and shipped product; designed UI in Figma from wireframes through to high-fidelity mockups.
- Designed and built the Project Tracker (see Selected Projects below).
- Designed and dispatched ouvar's customer-facing email campaigns in Klaviyo — multi-section launch announcements with V1 → V2 migration FAQs, single-feature "what this means for you" releases with embedded UI screenshots, and clean transactional layouts (ouvar standalone + co-branded with MARS).
- Drove platform improvements based on user feedback, usage analytics, and product research.

Platform Support

Sept 2024 – Feb 2025

- Provided second-line technical support for an internal logistics platform serving operational users.
- Diagnosed user issues, reproduced bugs, and escalated to engineering with full repro steps.
- Maintained internal documentation and operational runbooks.

Onboarding & QA

May 2024 – Sept 2024

- Onboarded new clients onto the ouvar logistics platform with structured training and documentation.
- Performed QA across platform features prior to release; logged and verified defect fixes.

Hacktiv Colab Inc

Makati City, Philippines · Hybrid

- Built business applications on the Microsoft Power Platform for enterprise clients.
- Designed PowerApps interfaces (canvas + model-driven) and Power Automate workflows integrated with SharePoint, Dataverse, and Office 365.
- Translated client requirements into deployable Power Platform solutions.

03 TECHNICAL SKILLS

FRONTEND	React 19, Vite, Next.js, TanStack Query, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Framer Motion
BACKEND	Node.js, Express, REST API design, JWT auth, Zod validation, cookie-based sessions
DATABASE	PostgreSQL, Prisma ORM, schema design, migrations, seed scripts
AI / AUTOMATION	n8n, Claude API, OpenAI API, Whisper, Notion API, Klaviyo, LLM prompt engineering, workflow automation
DEVOPS	Git / GitHub, Docker, Vercel, Railway, npm, monorepo workflows, staging / production branching
DESIGN & PM	Figma (wireframes & high-fidelity mockups), Jira, Confluence
OTHER	Microsoft Power Platform, PowerApps, Power Automate, SharePoint, Dataverse

04 SELECTED PROJECTS

Project Tracker — Multi-tenant Project Management SaaS

DESIGNER, ARCHITECT & SOLE DEVELOPER · 2026

- Designed and built an end-to-end multi-tenant project management SaaS for an Australian logistics technology company as sole developer, owning every layer from PostgreSQL schema design to production deploy on Vercel + Railway with separate staging environments, validated against 92 documented UAT cases.
- Designed a PostgreSQL schema covering 18 entities (users, companies, segments, brands, projects, Gantt tasks, dependencies, comments, time logs, notifications, templates) via Prisma ORM.
- Implemented role-based access control across 12 user roles with hierarchical company → segment → brand scoping and 6 granular permission flags.
- Shipped end-to-end: project workflows for three project types, Gantt chart with milestones and dependencies, template-based setup, time logging, @mention comment threads, notifications, Kanban views, dark/light mode.
- Built JWT auth with HTTP-only cookies, Zod request validation, and middleware-based authorisation; Docker-based local Postgres and one-command dev orchestration.

Tech React 19 · Vite · TanStack Query · Express 5 · Prisma 7 · PostgreSQL 16 · Docker · JWT · Zod · jsPDF

Freight Exception Agent · TypeScript + Claude

2026

- An AI agent (TypeScript + Claude) that triages freight delivery exceptions: a tool-calling loop over twelve tools decides the customer remedy and whether to claim against the carrier, persists state across runs, and escalates cases above a dollar threshold to a human instead of guessing.
- Validated by a 7-scenario evaluation harness (26/26 assertions) grading each decision against deliberate traps — an SLA carve-out, a mislabelled total loss, a warehouse-fault shortage — plus an idempotency test proving re-runs never double-lodge a claim.

Tech TypeScript · Claude (Anthropic SDK) · Node.js · SQLite · Eval harness

AI Inbox & Meeting Automation · n8n + Claude API

2026

- Production-grade 9-node n8n workflow that triages a startup founder's inbox: Claude (Haiku 4.5) classifies each into 5 categories with confidence scoring + reasoning, routes Respond Needed items through a second Claude call to generate three reply variations (formal, casual, direct), and writes typed rows to Notion. About 50 seconds for 20 emails at roughly \$0.015 per run.
- Second pipeline turns meetings into decisions: OpenAI Whisper transcribes the recording, then a Claude extraction call writes a Notion Decisions Log and assigned Action Items (task, owner, due date). Both pipelines share five defensive-design layers, code-fence stripping, confidence-threshold fallback, cross-branch data preservation via n8n pairing, and select-option normalisation, so malformed AI output never breaks a run.

Tech n8n · Claude Haiku 4.5 · OpenAI Whisper · Notion API · JavaScript · Docker

AI Project Kickoff Automation · n8n + Claude API

2026

- Two-agent n8n pipeline that turns raw discovery notes into a structured kickoff brief and meeting agenda in a Notion workspace, each through a defensive parser; the brief drafter judges its own confidence and flags notes too thin to work from for human review instead of inventing details.

Tech n8n · Claude Haiku 4.5 · Notion API · JavaScript

05 EDUCATION

Bachelor of Science in Computer Science

2019 – 2023

National University Laguna

Dean's Lister · 4th Place, Microsoft Hackathon
